RE: In the Matter of applications of AT&T Inc. and Deutsche Telekom AG for consent to assign or Transfer Control of licenses and Authorizations; (WT Proceeding - No. 11-65).

Dear Commissioners:

Because science matters, the Tellus Museum in Cartersville, Ga. engages, educates, and inspires our visitors to make scientific connections through dynamic exhibits and enriching experiences. In order to provide our children with the best possible education, we must make sure we connect them to scientific information and resources.

We support the merger between AT&T and T-Mobile because it will bring increased access to wireless Internet for both adults and children across the country. Providing the latest in wireless broadband technology to over 97 percent of the American population will create many advantages for those who may not otherwise have benefited from access to the latest standard of mobile Internet.

The education statistics in Georgia and across the nation reflect the need for a more intensive approach to science, math and technology teaching in our schools. Additionally, increasing the flow of information between educational institutions and scientists with communities can improve scientific research in our country.

We must educate our children so they will be able to compete in a globalized economy. Creating more opportunities for our students to learn about science and math is critical to this effort. Please support the merger between AT&T and T-Mobile so we can increase access to wireless Internet, especially in our rural communities.

Sincerely,

Jose Santamaria
Executive Director
Tellus Science Museum

CC:
Chairman Julius Genachowski
Commissioner Michael J. Copps
Commissioner Robert M. McDowell
Commissioner Mignon Clyburn
